

Title	Supplemental Task Survey 2012 to the BIBB/BAuA Employment Survey 2012	
DOI	doi:10.7803/610.12.1.1.20	
Short description	The Supplemental Task Survey measures occupational mobility up to one year after the main interview for a subsample of the Employment Survey 2012 and provides information on "generic tasks" for approximately 4,300 persons. Nearly 2,300 of these persons also joint a second part of this study where they report the time spend on individual occupational tasks and the level of difficulty of these activities on a reporting day of their choice.	
Year of collection	2012	
Observation unit	Persons of the Employment Survey 2012 excluding persons with an advanced further training certificate (master craftsman, technicians, and alike)	
Data Access	Scientific Use File	GWA (on-site use); DVF (remote data access)
Number of variables	SUF (Part I): 104 SUF (Part II): 73	full texts: 5 (Part I), 1 (Part II)
Population	German Working Population excluding trainees and people with an advanced training certificate (master craftsman, technician, and alike)	
Weighting and extrapolation	Design and population weight; projection weight	
Representative spatial area	East/West Germany	
Number of valid cases	Part I: 4,356 ; Part II: 2,272	
Mode of data collection	Part I: CATI ; Part II: online/written	
Design	Cross-section	
Note	The full evaluation potential of these research data can usually be exploited only in conjunction with the BIBB/BAuA Employment Survey 2012.
